Keymacro is a simple and user-friendly app for macOS that lets you record and play keyboard shortcuts. The application has many of the features most people are looking for, such as the ability to record a macro, playback a recorded macro, or save a set of shortcuts to a file. The app's interface is very intuitive, since the main window is a row of tabs, each one of which has three icons. The first one, in the upper-right corner, has the same shape as the text button on macOS keyboard shortcuts (where the , , , etc. letters appear). Simply click it to record a shortcut, click again to play it, and then click again to save it. You can click the middle icon to add more shortcuts. If you need to save a set of shortcuts for future use, click the third icon on the right. The default save location is ~/Keymacro, but you can also choose a different one. There are three main options you can play with: Record a short-term shortcut Click this icon to record a keyboard shortcut by pressing the app's default key sequence (default: ---) and dragging the mouse cursor on the app's window. The shortcut then appears in the list below in red.
